MEDICAL DEVICE FOR EXPLANTATION

5 The invention relates to a medical device (1) for
explanting a flexible pouch (P) containing a fluid, which
pouch (P) comprises an envelope (E) having an inside face
(F), said device comprising at least perforation means
(2C) for perforating the pouch (P) and securing means for
10 securing the device to the pouch (P) so as to explant it,
said medical device being characterized in that said
perforation means (2C) make it possible to form an
orifice in the flexible pouch (P) so as to enable the
securing means to pass through, which means are formed by
15 anchor means (12) acting from the inside of the pouch (P)
on a portion of said inside face (F) of the envelope to
generate bearing engagement sufficient to enable the
pouch to be explanted. An endoscopic medical device for
explantation.
